SOCKET PROGRAMMING

Intro

This week, our attention is directed towards utilising sockets to enable real-time communication among modules. This capability will empower seamless and instant information exchange within our projects. Additionally, this week marks the exciting kickoff of our group projects.

Instructions

Part 1

Use the slides provided and attend the prac to learn about basic strategies for Sockets.

A video is also provided to look back on, it goes through the concepts required.

https://youtu.be/PQ_m7mJWoVw

Part 2

As per the last weeks, import your weekly project into a new repo. Make all the due modifications to apply tests into it.

Submission details and Delivery

- Once you are done, push your code into your repo. Pls follow the github guidelines given in Task 1.4P
- Share your repo link and provide screenshots of the running code as evidence, convert it to .pdf and upload it to the OnTrack.

If you want to be sure, simply clone your repo. If you can clone it, I can clone it 😊
