PROJECT BOOTSTRAP

Intro

You now have your team, it is time to make a good plan!

Instructions

Start creating the SRS document for your group project, this document can grow over time, but should be

- Not ambiguous
- Straight forward

Step1

As a team, create the SRS document to the best of your abilities. One of the key components will be the use cases you are going to develop. The SRS document provided is a guideline, feel free to make changes.

Here are some good links for some advice

[Writing an effective SRS document](https://diceus.com/custom-software-requirements-specification/) <https://diceus.com/custom-software-requirements-specification/>

Step 2

Create a Trello board (<https://trello.com/signup>) using at least the structure "Sprint 1, Sprint 2, To do, Doing, Done" and add the tasks. The tasks should be non-ambiguous and of a correct size. **Remember to make the Trello board public so that unit staff can access it.**

- Each team member should contribute ~50 hours of work for each group project.
- Each task requires a name, a description, an allocated person.
- Each task shouldn't be any more than 7 hours, decide as a team, how long each task will take, and be reasonable. Add the length of the task to the name, for example "Express bootstrap 2", meaning it should take at the most 2 hours.

Submission details and Delivery

Please upload a pdf document with the SRS, also include the Trello board link in your document on the first page.
