SIT725
TASK 1.4P

INTRODUCTION TO PROGRAMMING

Intro

It is strongly recommended that you attend all Workshops, and you must complete them each week. In the Welcome Package (Task 1.1P) you would have signed up for your Github account (if you didn't have one before). Make sure you have done so, and that the repositories that you make are public from now on. Every Wednesday morning a script is automatically executed, and it will download your repository.

It is a machine, so it will not make mistakes, the only reasons it may not be able to download your code is if it unreachable. Also, if you submit after the due date (Sunday) it will be automatically marked as late.

Instructions

In the first workshop you will learn about the following:

- Basic programming
- Git

Submission details and Delivery

- Once you are done, push your code into your repo.
- Share your repo link and provide screenshots of the running code as evidence, convert it to .pdf and upload it to the OnTrack.

If you want to be sure, simply clone your repo. If you can clone it, I can clone it 😊

To streamline code submissions, please follow the following GitHub Submission Guidelines:

1. Create a Public GitHub Repository
   - Set up a public GitHub repository named **SIT725** under your github account.
   - You will use this single repository for all your coding tasks for this unit throughout the trimester.

2. Organize by OnTrack Tasks
   - Within your **SIT725** repository, create folders or organize your code in a way that clearly separates each task.

3. Submit the GitHub Link
   - Once you've completed task, submit the specific link for that task in your onTrack
